

Engineering Department SOP

Nexora Technologies Pvt Ltd | Controlled Internal Document

Document ID: NEX-ENG-SOP-001

Version: 2.0

Status: Active

Effective Date: 2026-09-01

Owner: Engineering Management

Category: Engineering

1. Development Workflow

Work begins from an approved ticket or requirement. Changes should use a feature branch, code review, automated checks, and the team's approved merge process.

2. Code Review

At least one authorized reviewer checks correctness, security-sensitive changes, test coverage, maintainability, and alignment with the requirement.

3. Testing

Developers run relevant unit, integration, or automated checks before requesting merge. Failed checks must be investigated rather than bypassed without authorization.

4. Deployment

Production deployments follow the approved release process. Emergency changes require the emergency change procedure and retrospective documentation.

5. Secrets

Never place passwords, API keys, or production tokens in source code, tickets, screenshots, or public repositories.

6. Documentation

Material architecture, configuration, API, and operational decisions must be documented in the approved repository or knowledge base.
