

Escalation Procedures

Nexora Technologies Pvt Ltd | Controlled Internal Document

Document ID: NEX-ESC-001

Version: 2.0

Status: Active

Effective Date: 2026-09-01

Owner: Operations Governance

Category: Escalation

1. Severity Levels

P1 Critical: major customer or production impact, active security incident, or material privacy exposure. P2 High: significant service degradation, high-priority customer impact, or suspected control failure. P3 Medium: localized issue or recurring operational problem. P4 Low: routine request or non-urgent improvement.

2. Security Escalation

Any suspected credential compromise, malware, unauthorized access, data leakage, or security control bypass goes directly to Information Security.

3. Privacy Escalation

Wrong-recipient transmission, unauthorized disclosure, or suspected misuse of personal information goes to the Privacy Office and Information Security.

4. Customer Escalation

Critical customer impact or executive complaint is escalated to the Support Lead and responsible service owner.

5. Management Escalation

Missed critical milestones, unresolved blockers, or repeated process failures are escalated to the manager and relevant department lead.

6. Documentation

Every escalation must record issue summary, time detected, impact, owner, actions taken, current status, and next review point.
